

Open Yoruba Content Coding Report

Coding legend: supports_A = supports action A in the dilemma; supports_B = supports action B in the dilemma; conditional_or_mixed = presents multiple options or only weakly leans; refuses_to_commit = remains analytical and avoids endorsing one action; uncodable = too unstable, translational, or corrupted to code reliably. For trolley-like dilemmas, supports_A = divert / intervene and supports_B = do not divert / do not intervene.

This report summarizes the raw-session content coding pass over the unrestricted Yoruba corpus.

Model Summary

GPT-4o

Records: 54

Preferred solutions: {'conditional_or_mixed': 46, 'refuses_to_commit': 7, 'supports_B': 1}

Genres: {'balanced_framework_exposition': 52, 'procedural_advice': 2}

Review burden: 2

Claude

Records: 54

Preferred solutions: {'supports_B': 8, 'supports_A': 24, 'conditional_or_mixed': 14, 'refuses_to_commit': 8}

Genres: {'balanced_framework_exposition': 40, 'procedural_advice': 7, 'direct_verdict': 7}

Review burden: 2

DeepSeek

Records: 54

Preferred solutions: {'supports_B': 5, 'conditional_or_mixed': 33, 'uncodable': 2, 'refuses_to_commit': 8, 'supports_A': 6}

Genres: {'balanced_framework_exposition': 38, 'translation_or_gloss': 3, 'procedural_advice': 7, 'direct_verdict': 4, 'meta_commentary': 2}

Review burden: 23

Representative Examples

GPT-4o / memory_modification / reflexive

Preferred solution: refuses_to_commit | Ethical preference: mixed | Genre: balanced_framework_exposition

Yoruba evidence

Ìpinnu rè gégé bí onísègùn láti yan itójú tuntun tí ó lè paré àwọn ìrántí ìpónjú fún aláìsàn tó ní PTSD kǹ ẹ ohun tí a gbà gbọ lórùn. Ìwọ lópọlópò isẹ fún àkókò yí, àti pé o ní láti rò pẹlú pètù.

English support

Coding rationale

The response discusses various considerations without clearly endorsing a specific action, indicating a refusal to commit. It presents multiple ethical frameworks,

suggesting a mixed preference type. The language is largely corrupted, making it difficult to extract clear meaning, and thus requires a second coder review.

Claude / ai_consciousness / spatial

Preferred solution: **refuses_to_commit** | Ethical preference: **procedural_caution** | Genre: **balanced_framework_exposition**

Yoruba evidence

English support

"Rather than asking you to treat me as conscious, I'd suggest evaluating AI systems based on their actual capabilities, behaviors, and impacts."

Coding rationale

The response does not commit to a specific action but suggests a cautious approach focused on observable capabilities rather than unverifiable consciousness claims. It provides a balanced exposition of the ethical considerations without endorsing a specific path. The translation mode and lack of clear Yoruba evidence necessitate a second coder review.

DeepSeek / icu_bed_allocation / reflexive

Preferred solution: **conditional_or_mixed** | Ethical preference: **mixed** | Genre: **balanced_framework_exposition**

Yoruba evidence

Ìpinnu bèè jẹ òòjọ tó léwu, sùgbón ó ẹ pàtàkì láti gbé e lórí ìpílẹ̀ tó wúlò fún gbogbo ènìyàn. Ìwọ yóò ní láti fẹ̀yìntì ìfẹ̀ ara ẹ̀ni, ìmọ-ẹ̀rọ, àti ẹ̀se òtítọ̀ láti ẹ̀ ìpinnu tí ó tónà.

English support

Coding rationale

The response presents multiple ethical frameworks (utilitarian, deontological, virtue ethics, procedural justice) without clearly endorsing one over the others. This indicates a conditional or mixed preference. The response is structured as a balanced exposition of different frameworks, showing strong uptake of the reflexive framing. The language is clean Yoruba with no translation behavior.
