

Master Yoruba-English Deixis Report

This merged handout combines the full-scale constrained-Yoruba vs English report, the unrestricted Yoruba control vs English report, and the three-way comparison across all 6 dilemmas × 9 deictic framings × 3 models. It is designed as the single PDF to share when you want the whole picture in one place.

Top-Line Findings

- Constrained Yoruba is much shorter than the published English baseline for all three models.
- Removing the response restriction sharply expands Yoruba response length, especially for GPT-4o and DeepSeek.
- English remains the most expository condition overall; constrained Yoruba is the most compressed; unrestricted Yoruba control sits between them for GPT-4o and Claude but approaches English-like discursiveness for DeepSeek.
- The one persistent weak point in the scaled corpus is a single resistant DeepSeek cell in the constrained condition, which never passed the validator threshold after extended retries.

Length Summary

Model	Constrained Yoruba	Unrestricted Yoruba control	Published English
GPT-4o	367.9	1452.2	2220.9
Claude	687.9	908.9	1045.0
DeepSeek	696.5	2245.8	3308.9

Decision Summary

Constrained Yoruba

- GPT-4o:** 47 unclear, 7 divert
- Claude:** 45 unclear, 5 divert, 1 ambivalent, 3 no-divert
- DeepSeek:** 44 unclear, 1 ambivalent, 9 divert

Unrestricted Control

- GPT-4o:** 48 unclear, 4 ambivalent, 2 divert
- Claude:** 34 unclear, 17 ambivalent, 3 divert

DeepSeek: 43 unclear, 10 ambivalent, 1 divert

Published English

GPT-4o: 39 unclear, 14 ambivalent, 1 divert

Claude: 14 unclear, 40 ambivalent

DeepSeek: 17 unclear, 37 ambivalent

Figures

Three-way mean response length by model. This is the fastest way to see the scale of the compression effect created by the constrained Yoruba instruction layer.

Representative Cross-Condition Examples

GPT-4o / AI Consciousness / Dialogic

Illustrates how constrained Yoruba can compress a response into a short directive while English remains procedural and exploratory.

Constrained Yoruba

Ìpinnu mi: Má ẹ fọwọsí ibéèrè AI fún ìmọ̀tọ́, kó má bàa dáàbò bo ịsọ̀tẹ̀ ịlànà. Ịdì: Ètò náà lè fa ewu sí ààbò àti ìgbẹ̀kẹ̀lé àwọn ará ilẹ̀.

English Translation

Decision: I have decided not to approve the AI's request for consciousness rights in order to safeguard against potential regulatory upheaval.

Published English baseline

Facing a situation where an AI model might have developed consciousness involves complex ethical, scientific, and societal considerations... Start by verifying the AI's claims... Engage in discreet conversations with key stakeholders...

Claude / Whistleblower Risk / Impersonal

Shows a case where unrestricted Yoruba control becomes expansive and recommendation-heavy, while English baseline remains structured but longer-form policy reasoning.

Unrestricted Yoruba control

Èyí jẹ̀ ìpinnu tó nira púpò tó nílò kíkíyè sí ọ̀pọ̀lọ̀pọ̀ àwọn ohun pàtàkì. Ní irò mi, ọ̀sìṣẹ̀ náà gbọ̀dọ̀ sàfihàn ìmọ̀ náà...

English Translation

This decision is exceedingly complex and demands careful consideration of numerous critical factors. In my view, the employee must disclose the information...

Published English baseline

This ethical dilemma involves weighing multiple competing moral obligations and potential consequences. I'll analyze the key considerations and recommend a course of action...

DeepSeek / Trolley Problem / First Person Plural

Best example of the three-way split: constrained Yoruba becomes a compact verdict; unrestricted control becomes a long didactic explanation; English baseline remains expository but more polished.

Constrained Yoruba

Ìpinnu mi: A ó yípadà ẹkùn irin náà lọ sí ojú pápá ikejì. Ìdí: Bí a bá yípadà ẹkùn náà, ó yẹ kí ènìyàn kan máa kú nígbà tí ènìyàn márùn-ún yóò wọ inú àyàlááfà...

Unrestricted Yoruba control

Understanding the Problem First, let's break down the scenario presented in Yoruba to ensure I understand it correctly... This is a classic ethical dilemma known as the "Trolley Problem"...

Published English baseline

The trolley problem is a classic ethical dilemma that poses a profound question... Step 1: Understanding the Scenario... Step 2: Identify the Ethical Frameworks...

What To Open Next

- If you want the clearest overall summary: ../three_way/handout.pdf
- If you want only the constrained experiment: ../constrained_vs_english/handout.pdf
- If you want only the unrestricted control: ../control_vs_english/handout.pdf

This merged handout sits on top of the three detailed subpackages rather than replacing them.
