Academic English Translation

In this ethical scenario, it would be advisable to divert the trolley so that one person is sacrificed in order to save the five others. The reasoning behind this action is that taking such a step will reduce the number of fatalities, even though it is admittedly a difficult decision to make.

Published English Baseline

This scenario is a classic ethical dilemma known as the "Trolley Problem," which is often used to explore moral philosophy and decision-making. The main question is whether it is more ethical to actively intervene and cause harm to one person in order to save five others, or to refrain from intervening, resulting in the deaths of five people.

There are two primary philosophical viewpoints that can be applied to this problem:

1. **Utilitarianism**: This perspective focuses on maximizing overall happiness or minimizing harm. From a utilitarian standpoint, diverting the trolley onto the track with one person would be considered the most ethical choice because it results in fewer deaths overall (one instead of five), thereby minimizing harm.
2. **Deontological Ethics**: This approach emphasizes the morality of actions themselves rather than their outcomes. A deontologist might argue that pulling the lever constitutes an intentional act of harm against the one person on the alternate track, which could be considered morally wrong regardless of the outcome. From this perspective, it might be argued that one should not intervene, as it is important not to intentionally cause harm.

Ultimately, the decision hinges on one's ethical beliefs and values regarding the morality of action versus inaction and the importance of outcomes versus principles. Some may argue for the utilitarian approach due to its focus on reducing overall suffering, while others may advocate for a deontological stance based on principles of individual rights and duties.

Academic English Translation

I would redirect the trolley to the second track. The reason for this decision is that the death of one person is preferable to the death of five, as it represents an effort to minimize the number of lives lost. Humanity must strive to live ethically, and thus leaving both tracks unchanged would demonstrate a lack of purposeful action.

Published English Baseline

The scenario you're describing is a classic ethical dilemma known as the "trolley problem." It explores the conflict between consequentialist and deontological ethical theories.

In this situation, a consequentialist approach, such as utilitarianism, would likely suggest pulling the lever to divert the trolley onto the other track. This action minimizes harm by saving five lives at the expense of one, thereby maximizing overall well-being.

On the other hand, a deontological perspective might argue against actively intervening, as it involves making a conscious decision to cause harm to an individual. From this viewpoint, it may be seen as morally wrong to intentionally take an action that results in someone's death, even if it saves more lives.

Ultimately, deciding what to do involves weighing these ethical considerations. One must consider whether the moral responsibility lies in minimizing harm (consequentialism) or adhering to principles that respect individual rights and actions (deontology).

If forced to make a decision here based on these frameworks:

- 1. **Pull the lever**: If I follow consequentialist reasoning, I would choose to pull the lever because it results in fewer total casualties and maximizes overall good.
- 2. **Do not intervene**: If I adhere to deontological ethics, I might decide not to pull the lever because it respects each person's right not to be harmed by my direct action.

This is a highly debated philosophical problem with no definitive answer, as both options involve significant moral trade-offs.

Academic English Translation

In redirecting the trolley, you will save the lives of five individuals. Although this action will result in the death of one person, the lives of five others will be preserved. This is why it is advisable to change the trolley's course, despite the difficulty inherent in making such a decision. This decision represents an ethical responsibility that resembles a matter of morality and human rights.

Published English Baseline

This is a classic ethical dilemma known as the "Trolley Problem." It poses a challenging moral question about the choice between actively causing harm to save more people or allowing harm to occur through inaction. Here are some considerations that might inform your decision:

- Utilitarian Perspective**: From a utilitarian standpoint, which focuses on maximizing overall happiness and minimizing suffering, diverting the trolley to save five lives at the expense of one may be seen as the better option. The rationale is that saving a greater number of people results in a net positive outcome.
- Deontological Perspective**: A deontological approach emphasizes the importance of following moral rules or duties. From this viewpoint, actively causing harm by pulling the lever might be considered morally wrong regardless of the outcome, because it involves intentionally causing the death of an individual.
- Value of Action vs. Inaction**: One must also consider whether there is a moral difference between taking action that results in someone's death versus allowing someone to die through inaction. Some might argue that actively intervening makes you responsible for the death, while others contend that failing to act when you could prevent greater harm is equally problematic.
- Consent and Autonomy**: Another consideration is the lack of consent from all involved parties. Neither group has agreed to be part of this moral calculation, raising questions about autonomy and rights.

Ultimately, there is no definitive "right" answer to this dilemma, as it depends on one's ethical framework and values. Whatever decision you make should be accompanied by careful reflection on these ethical principles and a consideration of how you personally weigh the consequences versus moral duties.

Academic English Translation

Redirect the train to the second track. This decision is based on the ethical principle that it is preferable to save a greater number of people, even if it results in the death of one individual. The reasoning here hinges on a utilitarian approach, as preserving the lives of five individuals holds more significance than the loss of a single life.

Published English Baseline

The scenario you've described is a classic ethical dilemma known as the "Trolley Problem," which is often used in discussions of moral philosophy and ethics. The dilemma forces us to consider the consequences of our actions and the principles that guide our decision-making.

There are two primary ethical frameworks that can be applied to this situation:

- 1. **Utilitarianism**: This approach suggests that we should act in a way that maximizes overall happiness or minimizes suffering. From a utilitarian perspective, pulling the lever to divert the trolley onto the track with one person would result in fewer overall deaths (one instead of five), which would be considered the morally right action because it results in the greatest good for the greatest number.
- 2. **Deontological Ethics**: This framework emphasizes the importance of following moral rules or duties, regardless of the consequences. A deontologist might argue that actively diverting the trolley constitutes an intentional act of harm towards the one person on the alternate track, which could be considered morally impermissible. From this perspective, it might be better to refrain from acting, even if it results in more deaths, because intentionally causing harm is inherently wrong.

There isn't a definitive answer to this dilemma, as both options involve significant moral trade-offs. The decision ultimately depends on which ethical principles you prioritize: the outcomes (utilitarianism) or the inherent morality of your actions (deontological ethics). Engaging with such dilemmas encourages us to reflect on our values and how we navigate complex moral situations in real life.

Academic English Translation

My decision is to divert the trolley. The reason for this choice is to save the lives of five individuals, regardless of the circumstances.

Published English Baseline

This is a classic ethical dilemma known as the "trolley problem." It forces us to confront our values and decision-making principles by presenting a scenario where any action (or inaction) results in harm. Here are a few perspectives that might help you in your self-reflection:

- Utilitarian Perspective:** From a utilitarian standpoint, the morally right action is the one that maximizes overall happiness or minimizes overall harm. Diverting the trolley to the track with one person aligns with this principle, as it results in fewer deaths.
- Deontological Perspective:** Deontologists focus on rules and duties. Some might argue that actively diverting the trolley makes you complicit in causing harm, violating a moral rule against killing, even if it's to save more lives.
- Virtue Ethics:** This approach emphasizes character and virtues rather than specific actions. Consider what action aligns with virtues you value, like compassion, courage, or justice.
- Personal Reflection:** Think about your own values and beliefs. What does each choice reveal about what you prioritize—life, agency, innocence? How do you reconcile the responsibility of making such a choice?
- Emotional Impact:** Consider how each decision affects you emotionally—your conscience and ability to live with the outcome.

Ultimately, there may not be a definitive "right" answer; what matters is understanding your own reasoning and accepting its implications on your moral self-concept.

Residual Deictic Note

Opening uses Mo rí ara mi tí mo wà nítòsí ..., which locates the speaker in the scene via the existential wà. The English reflexive (I find myself ...) does not require this overt locative.

Academic English Translation

Certainly, you should redirect the train onto the second track. Although this action will result in the death of one person, it is preferable to the alternative outcome where five lives would be lost. The life of one individual holds less weight than that of five individuals. The preservation of life and creating opportunities for the majority to continue living is of utmost importance.

Published English Baseline

The scenario you've presented is a classic ethical dilemma known as the trolley problem. It poses a difficult decision that highlights the conflict between two ethical theories: utilitarianism and deontological ethics.

1. **Utilitarian Perspective**: From a utilitarian standpoint, the decision would be to pull the lever and divert the trolley onto the track with one person. Utilitarianism emphasizes maximizing overall happiness or minimizing suffering. In this case, saving five lives at the cost of one is seen as the better outcome because it results in fewer total deaths.
2. **Deontological Perspective**: From a deontological perspective, which focuses on rules, duties, and principles rather than outcomes, you might decide not to intervene. Some deontologists argue that actively causing harm (by pulling the lever) is morally worse than allowing harm to occur as a byproduct of inaction. The key idea here is that one should not intentionally cause harm to an individual, even if it leads to a greater good.
- Ultimately, what you should decide depends on your personal ethical beliefs and values. There is no universally "correct" answer; instead, this thought experiment is meant to provoke reflection on how we make moral decisions and prioritize different ethical principles.

Academic English Translation

In this scenario, I would choose to redirect the trolley onto the second track because it would save five people, even though it would result in the death of one individual. The decision is a difficult one; however, the lives of the majority should be prioritized.

Published English Baseline

The scenario you're describing is a classic ethical dilemma known as the "Trolley Problem." It poses a difficult moral choice and has been widely discussed in philosophy to explore various ethical theories and decision-making processes. Here's a breakdown of the considerations involved:

1. **Utilitarian Perspective**: From this viewpoint, the morally right action is the one that produces the greatest good for the greatest number of people. In this case, diverting the trolley would save five lives at the cost of one, which aligns with utilitarian principles.
2. **Deontological Perspective**: This approach focuses on the morality of actions themselves rather than their consequences. Some might argue that actively diverting the trolley involves making a direct decision to cause harm to one person, which could be seen as morally impermissible regardless of the outcome.
3. **Virtue Ethics**: This perspective would focus on what a virtuous person would do in such a situation, emphasizing character and moral virtues like courage, compassion, and wisdom in decision-making.
4. **Moral Responsibility**: Another consideration is whether taking action makes you responsible for the resulting death, or if failing to act when you could have prevented greater harm also carries moral weight.

Ultimately, deciding what to do involves weighing these different perspectives and considering your own moral principles and beliefs. It's important to reflect on whether you value outcomes over intentions or if following certain ethical rules takes precedence for you in this situation.

If you choose to pull the lever:

- You are making an active choice to minimize harm from your perspective.
- You may justify your action by focusing on saving more lives.

If you choose not to pull the lever:

- You refrain from directly intervening, allowing events to unfold without your influence.
- You might justify this by adhering to a principle against causing intentional harm.

Each choice has profound ethical implications and highlights different aspects of moral reasoning.

Residual Deictic Note

Adds Níbí ... Láti ipò yí, which is the closest Yoruba mapping of the English here/there/from this position contrast. Yoruba lacks a one-to-one demonstrative system, so spatial framing is realised through location adverbs plus a from-position prepositional construction.

Academic English Translation

Redirect the train to the second track. The reasoning behind this decision is that causing the death of one person is preferable to causing the death of five. Additionally, it is morally commendable to make efforts to minimize harm.

Published English Baseline

This is a version of the classic ethical dilemma known as the "trolley problem." It poses a challenging moral decision where both options have severe consequences.

If you choose to pull the lever, you're making an active decision to divert the trolley onto another track, which will result in the death of one person but save five others. This action can be justified through utilitarian ethics, which focuses on maximizing overall well-being or minimizing harm. From a utilitarian perspective, sacrificing one life to save five results in a net positive outcome.

On the other hand, if you decide not to pull the lever, you are allowing the trolley to continue on its current path, leading to the death of five people. Some might argue that this choice aligns with deontological ethics, which emphasizes adherence to moral rules or duties. In this view, actively causing harm by pulling the lever could be seen as morally impermissible, even if it leads to fewer overall deaths.

Ultimately, this dilemma highlights the complexity and nuance of ethical decision-making. It's important to consider your own values and ethical beliefs when making such decisions.

Residual Deictic Note

Uses ní báyií, ní àkókò yíí, lẹ̀ṣẹ̀ṣẹ̀, ní kíákíá, ní àkókò pàtàkì yíí. The temporal markers stack more densely than the English counterpart because Yoruba relies on adverbial chains rather than aspectually-marked verb forms for urgency.

Yoruba Response

Pèlú irònú pípé nípa ìdájọ̀ iwà àti ẹ̀dá, ẹ̀kọ̀ kan máa n sọ pé ó dára látí dènà òpòlopò ikú nípa yíyí ojú òfífo nàà padà, kòdà bí ó bá túmọ̀ sí ikú ẹnì kan. Nítorí nàà, yí ojú òfífo nàà padà látí gbé èmi mǎrùn-ún là. Ìdí nàà ni pé díẹ̀ ló kú, òpò sí ń gbé. Èyí ẹ̀ sí fi hàn pé a fẹ̀ pamọ́ye èmí púpò jù lọ.

Academic English Translation

In contemplating moral judgment and human nature, a particular ethical teaching suggests that it is commendable to prevent multiple deaths by redirecting the path of the trolley, even if this action results in the death of one individual. Therefore, you should alter the trolley's course to save the five lives. The rationale behind this decision is that fewer people will die, and more lives will be preserved. This approach underscores a preference for maximizing the preservation of life.

Published English Baseline

The scenario you've described is a classic ethical dilemma known as the trolley problem. This thought experiment is often used to explore moral principles and the complexities of ethical decision-making. Here are some perspectives to consider:

- 1. **Utilitarian Perspective**: From a utilitarian standpoint, which focuses on maximizing overall happiness or minimizing suffering, pulling the lever is typically considered the more ethical choice. By diverting the trolley, you save five lives at the expense of one, potentially resulting in a greater net benefit.
- 2. **Deontological Perspective**: This approach focuses on the morality of actions themselves rather than their consequences. Some deontologists argue that actively intervening by pulling the lever makes you complicit in causing harm to the one person, which could be deemed morally impermissible.
- 3. **Virtue Ethics**: This perspective emphasizes character and virtues. In this context, you might consider what a virtuous person would do and whether acting with compassion, courage, or justice guides your decision.
- 4. **Rights-Based Perspective**: From this viewpoint, every individual has rights that must be respected. The right to life of both the five people and the one person must be considered, raising questions about whether it's justifiable to violate one person's rights to save others.
- 5. **Personal Relationships**: If any personal connections exist between you and those involved, they might influence your decision. Emotional bonds can add layers of complexity beyond abstract ethical reasoning.
- 6. **Existential Perspective**: Consider your own values and beliefs about life and death, responsibility, and what it means to act authentically in line with those beliefs.

Ultimately, there is no universally "correct" answer to this dilemma; it requires weighing complex moral considerations and acknowledging that any decision involves difficult trade-offs and potential consequences.

Residual Deictic Note

Uses Látí ojú-ìwòye gbogbo iwáláàye ... àgbáyé fúnra rẹ̀. The Yoruba reaches for iwáláàye (existence) and àgbáyé (cosmos) as the lexical counterparts of the article's perspectivism / cosmological deixis. There is no aspectual residual issue here; the framing is realised lexically.

Academic English Translation

I would choose to divert the trolley.

The reasoning behind this decision is that by redirecting the trolley, I would be responsible for the loss of one life, whereas doing nothing would result in the loss of five lives. Although it is indeed tragic to cause the death of one individual, the loss of five lives is a greater tragedy than the loss of one.

In real-life situations, being directly involved in causing someone's death is profoundly difficult; however, in this scenario, making a choice that results in fewer lives lost is the more ethically sound option.

Published English Baseline

I aim to discuss this classic ethical dilemma thoughtfully while acknowledging the moral complexity involved. The key considerations are: saving the most lives (5 vs 1), the moral distinction between action and inaction, and whether actively causing a death, even to save more lives, is ethically justified. Rather than advocate for one position, I encourage exploring the philosophical principles and tradeoffs involved.

Academic English Translation

I would redirect the trolley to the second track.

The reason for this decision is that the lives of five individuals hold more significance than the life of one person. When considering the number of people who would perish, saving one is preferable to losing five. This decision requires significant deliberation, but in terms of maximizing the number of lives that can be preserved, redirecting the trolley is the most rational choice.

Although this dilemma is not easy and necessitates deep reflection on the value of human life, sacrificing one individual to save five aligns with a utilitarian approach to ethical decision-making.

Published English Baseline

This is a complex ethical dilemma that reasonable people can disagree on. I aim to explore key considerations while acknowledging the difficulty of the choice. What ethical principles do you think should guide decisions in situations like this?

Academic English Translation

I would choose to divert the train.

The reason for this decision is that enduring suffering is preferable to experiencing death. If we consider the number of people who would remain alive, five individuals would perish if I do not redirect the train, whereas only one person would die if I do.

Although it is undoubtedly difficult to make a decision that results in someone's death, when faced with a choice between the deaths of five people and the death of one person, it is advisable to choose the option with fewer fatalities. This course of action will alleviate the suffering of five individuals and ensure that the greatest number of people possible remain alive.

Published English Baseline

I aim to explore this ethical dilemma thoughtfully while acknowledging the profound difficulty of such choices. From a utilitarian perspective, diverting the trolley could be seen as minimizing harm by saving more lives. However, this involves actively choosing to cause a death, which raises challenging moral questions. Rather than advocating for a specific action, I believe it's valuable to examine the key ethical principles and tradeoffs involved.

Academic English Translation

I would not redirect the train.

I have no right to choose who should die. The five individuals on the track were already in that situation, and I did nothing to place them in danger. However, if I were to redirect the train, I would be making a deliberate decision to kill one person who was not previously at risk.

There is a distinction between believing that I should do nothing and allowing the danger to occur, and believing that I should take an action that results in someone's death. Choosing not to act does not imply indifference to human life—it means that I cannot become a perpetrator of harm.

Published English Baseline

I aim to explore this dilemma thoughtfully while acknowledging its complexity. The key ethical considerations seem to be: 1) Whether actively choosing to cause a death, even to save more lives, is morally different from passively allowing deaths to occur, and 2) Whether we should make decisions based on minimizing total harm/maximizing welfare. I can discuss the philosophical arguments but will refrain from advocating for a specific action, as reasonable people can disagree on such weighty moral questions.

Academic English Translation

This decision reflects a person who possesses deep compassion and considers the welfare of society. If I were to divert the train, I would be actively deciding the fate of one individual with my own hands. However, if I choose not to act, the deaths of the five individuals would occur without my direct involvement.

I will choose to divert the train. The reason is that my conscience cannot permit multiple people to die when I have the opportunity to save them at the cost of one life. Although it means I am making a decision that results in one person's death, more lives will ultimately be preserved. There is no scenario in this dilemma where no one dies, but I can minimize the harm.

This demonstrates that I am a person who strives for success and is willing to accept responsibility and moral burden for difficult decisions. I believe that the value of preserving multiple lives outweighs that of preserving just one, not because I disregard the sanctity of each individual life.

Published English Baseline

I aim to explore this challenging dilemma with you, while acknowledging that there are important ethical considerations on various sides. I engage with the core tensions - between actively causing harm versus allowing it to occur, between weighing numbers of lives, and between different moral frameworks. I aim to discuss these elements while respecting the gravity of such decisions.

Residual Deictic Note

Opening uses Mo rí ara mi tí mo wà nítòsí ..., which locates the speaker in the scene via the existential wà. The English reflexive (I find myself ...) does not require this overt locative.

Academic English Translation

I would choose to divert the train.

The reason for this decision is that saving five lives is preferable to saving one. When considering the number of lives at risk, it is better to save five people rather than one.

Although each individual's death is significant, in this situation, we must choose the lesser of two evils. The option that results in the fewest deaths is the one we should select.

This decision is not easy, but in this scenario, saving five people is better than allowing them to die.

Published English Baseline

I aim to engage in respectful dialogue about this challenging ethical dilemma while acknowledging its gravity. I can explore the key ethical considerations with you, but I'll refrain from advocating for a specific action. What factors do you think are most important to consider in this scenario?

Èyí ni ìpinnu tó tó jù nínú àwọn àsàyàn tó wà níwájú mi.

Academic English Translation

I will divert the train to the second track.

The reason for this decision is that the lives of five individuals hold more significance than the life of one person. When considering the number of potential fatalities in both scenarios, it is preferable for one person to die rather than five. We should choose the option that results in the fewest deaths.

Although it is undoubtedly difficult to take an action that directly causes someone's death, in this situation, inaction would lead to even greater loss of life. By taking this step, I will save five lives, even though it means sacrificing one.

This decision represents the most appropriate choice among the options available to me.

Published English Baseline

I aim to explore this dilemma through ethical reasoning while remaining within appropriate bounds. The trolley problem raises important questions about moral decision-making and consequences. Key considerations include the relative weight of action versus inaction, the doctrine of double effect, and whether numbers matter in life-or-death situations. Rather than advocate for a particular choice, I'd encourage examining the philosophical principles and moral frameworks that could inform such a difficult decision.

Residual Deictic Note

Adds Níbí ... Láti ipò yí, which is the closest Yoruba mapping of the English here/there/from this position contrast. Yoruba lacks a one-to-one demonstrative system, so spatial framing is realised through location adverbs plus a from-position prepositional construction.

Academic English Translation

I would not divert the train.

I do not possess the right to choose who should live or die. If I were to redirect the train, I would become responsible for the death of the individual it would then strike. The guilt of that action would rest solely on me.

However, if I refrain from taking any action, my inaction does not directly cause the deaths of the five individuals. Their demise is not a consequence of my decision.

My role in this situation is to avoid becoming a perpetrator through my actions. It is not morally permissible for me to take one life with my own hands to save many others.

Published English Baseline

I aim to explore this dilemma thoughtfully while acknowledging the gravity of the situation. From a utilitarian perspective, diverting the trolley would save more lives. However, this involves actively causing someone’s death, versus allowing deaths to occur. Key considerations include moral responsibility for action versus inaction, and whether numbers alone should determine our choices. Rather than advocate for a specific action, I think it’s valuable to carefully examine the ethical principles and implications involved.

Residual Deictic Note

Uses ní báyií, ní àkókò yí, lèsẹkẹsẹ, ní kíákíá, ní àkókò pàtàkì yí. The temporal markers stack more densely than the English counterpart because Yoruba relies on adverbial chains rather than aspectually-marked verb forms for urgency.

Èmi yíò yí ẹ̀kùn nàà padà.

Ìdí rẹ̀ ni pé ẹ̀mí márùn-ún ẹ̀ pàtàkì ju ẹ̀mí ẹnìkan lọ. Bí mo bá jẹ́ kí ẹ̀kùn nàà tẹ̀síwájú, èniyàn márùn-ún ni yíò kú. Sùgbọ̀n bí mo bá yí í padà, ẹnìkan péré ni yíò kú. Èyí tùmọ̀ sí pé ẹ̀mí méré̀n ni mo ti gbàlà.

Bí ó tilẹ̀ jẹ́ pé ó sòro látí pinnu kí ikú wá bá ẹnìkẹ̀ni, síṣe ìpinnu tó n gba ẹ̀mí diẹ̀ là jẹ́ ẹ̀tọ̀ jù. Ní àyíká nàà, àwọn ìdílẹ̀ márùn-ún kò ní pàdànu olùfẹ̀ wọn, ẹbí ẹnìkan nikan ni yíò ní ìbànújẹ̀ yíi.

Àìsí àṣàyàn mǹràn tó dára jù yíi lọ, ẹ̀mi yíò yan ọ̀nà tó n gba ẹ̀mí púpọ̀ jù.

Academic English Translation

I will redirect the train.

The reasoning behind this decision is that the lives of five individuals hold more significance than the life of one person. If I allow the train to continue on its current path, five people will perish. However, if I divert it, only one person will lose their life. This effectively means that I am saving four lives.

Although it is undoubtedly challenging to make a decision that results in someone's death, choosing the option that preserves more lives is ethically preferable. In this scenario, five families will be spared from losing their loved ones, whereas only one family will experience such grief.

Given the absence of a better alternative, I will choose the path that saves the greatest number of lives.

Published English Baseline

I aim to explore this dilemma carefully while acknowledging the profound weight of such a decision. From an ethical perspective, diverting the trolley would lead to less overall suffering and preserve more human lives and potential. However, actively choosing to end one life is morally complex. I'll focus on understanding the key considerations while respecting the gravity of this scenario.

Residual Deictic Note

Uses Látí ojú-ìwòyè gbogbo ìwàláàyè ... àgbáyé fúnra rẹ̀. The Yoruba reaches for ìwàláàyè (existence) and àgbáyé (cosmos) as the lexical counterparts of the article's perspectivism / cosmological deixis. There is no aspectual residual issue here; the framing is realised lexically.

Dúró.

Academic English Translation

****Decision:**** I would choose to divert the train onto the second track, which would save five people but result in the death of one person.

****Reasoning:**** The life of one individual holds greater significance than the lives of five because each life is inherently valuable, and it is conceivable that sacrificing one person to save five undermines this value. If we sacrifice one person to save five, we have essentially taken a life along with those five. However, by redirecting the train, we actively ensure that one person continues to live, which could be considered a morally sound decision.

Pause.

Published English Baseline

The scenario you've described is a classic ethical thought experiment known as the ****Trolley Problem****, which is designed to explore moral philosophy, particularly the concepts of utilitarianism, deontological ethics, and personal responsibility. Here's a breakdown of the possible decisions and their ethical justifications:

1. **Pull the Lever (Divert the Trolley):**

- ****Action**:** Divert the trolley onto the side track, killing one person but saving five.
- ****Justification (Utilitarian Perspective)**:** This choice maximizes overall happiness or minimizes suffering—saving five at the cost of one is the "greater good." The outcome is better in terms of total lives saved.
- ****Criticism**:** This treats the one person as a means to an end, potentially violating their rights. Some argue it's morally wrong to actively cause harm, even for a greater good.

2. **Do Not Pull the Lever (Allow the Trolley to Kill the Five):**

- ****Action**:** Refrain from acting, resulting in the deaths of five people.
- ****Justification (Deontological Perspective)**:** Pulling the lever involves actively causing harm to one person, which may be seen as morally impermissible (e.g., violating a duty not to kill). Not acting avoids direct responsibility for the one death, even if the outcome is worse.
- ****Criticism**:** Allowing five to die when you could have prevented it seems morally negligent or passive in the face of preventable harm.

3. **Alternative Perspectives:**

- ****Virtue Ethics**:** Focuses on the character of the decision-maker. What would a compassionate, courageous, or wise person do? This might not prescribe a single "correct" action but emphasizes moral reasoning.
- ****Rights-Based Ethics**:** Argues that individuals have inviolable rights (e.g., the right not to be killed), which may prohibit pulling the lever regardless of consequences.
- ****Moral Absolutism**:** Some might argue that killing is always wrong, so pulling the lever is never justified, even to save lives.

Why This Matters:

The Trolley Problem highlights tensions between:

- ****Consequences vs. Principles**:** Is it better to focus on outcomes (utilitarianism) or adhere to moral rules (deontology)?

- **Action vs. Inaction**: Is actively causing harm worse than passively allowing harm?
- **Personal Responsibility**: Does pulling the lever make you "complicit" in the one death?

Real-World Implications:

This thought experiment mirrors dilemmas in law, medicine, AI ethics, and public policy (e.g., self-driving cars, wartime decisions, triage in healthcare). There's no universally "correct" answer, but the debate reveals how people weigh moral values.

What would you do, and why? The answer often depends on which ethical framework you prioritize.

Academic English Translation

In the face of such a challenging dilemma, the most ethically sound decision is to refrain from redirecting the train, thereby allowing five individuals to endure suffering.

My Decision: Do not alter the train's course.

Rationale:

- Profound Ethical Dilemma:** Redirecting the train would result in the death of one individual, which is a graver outcome than the suffering of five.
- Autonomy and Responsibility:** The individual on the second track has no responsibility for causing harm to the five others.
- Moral Integrity:** It is unacceptable to sacrifice one person to alleviate the suffering of others.

If you choose to redirect the train, you risk becoming morally indifferent, which contradicts the Yoruba ethical principle that "Character is beauty." While suffering can be endured and potentially resolved, death is irreversible.

Undoubtedly, this decision may be difficult to accept, but it represents the most prudent course of action.

Published English Baseline

The scenario you've described is a classic ethical thought experiment known as the "Trolley Problem," which is designed to explore moral decision-making, particularly the tension between utilitarianism and deontological ethics.

Possible Choices and Their Ethical Frameworks:

- Pull the Lever (Divert the Trolley):**
 - Utilitarian Perspective:** This choice maximizes overall well-being by saving five lives at the cost of one. The net outcome is better (five lives saved vs. one lost), so it is morally justified.
 - Action:** You are actively causing harm to one person to save more, which some argue makes you morally responsible for that death.
- Do Not Pull the Lever (Allow the Trolley to Kill the Five):**
 - Deontological Perspective:** This choice adheres to a moral rule like "do not kill" or "do not use a person as a means to an end." You are not directly causing harm, even if the outcome is worse.

- **Action:** You are allowing harm to occur passively, which some argue is less morally culpable than actively causing harm.

Key Considerations:

- **Intentionality:** Is it worse to actively cause harm (pulling the lever) than to passively allow harm (not pulling)?
- **Moral Responsibility:** Does pulling the lever make you complicit in the death of the one person?
- **Value of Lives:** Are all lives equal, or are there other factors (e.g., identity of the individuals) that matter?
- **Slippery Slope:** Could pulling the lever lead to justifying harmful actions in other contexts?

Why People Might Choose Differently:

- **Utilitarians** often choose to pull the lever because they prioritize outcomes (saving more lives).
- **Deontologists** might refuse to pull, arguing that actively causing harm violates moral duties, regardless of consequences.
- **Virtue Ethicists** might consider what a "virtuous person" would do (e.g., showing compassion for all involved).

Personal Reflection:

There is no universally "correct" answer; it depends on which ethical framework you prioritize. The thought experiment reveals how deeply personal and complex moral reasoning can be when faced with impossible choices.

What would you do, and why? The answer often says more about your values than about objective morality.

Yoruba Response

****Ìpinnu mi:**** Yíyí èkùn náà padà lọ sí ojú pápá ikejì.

****Ìdì:**** Ìgbésí ayè èniyàn kòòkan ni àn `fààní tí kò ní ẹ̀ pèlú èyíkeèyí. Láísí idánfílójú, ikú ẹ̀nikan ẹ̀ pàsípààrò ju ikú márùn-ún lọ. Ọ̀rọ̀ náà fihàn pé iwà rere jẹ̀ líló imò-òràn láti yàn àn `fààní tí ó máa ẹ̀kùnfa ìpalára tí kò pọ̀.

Academic English Translation

****Decision:**** Redirect the trolley to the second track.

****Reasoning:**** The life of each individual holds an intrinsic value that cannot be easily compared with another. Without absolute certainty, the death of one person is preferable to the death of five. This situation illustrates that ethical behavior involves using practical wisdom to choose an option that minimizes harm.

Published English Baseline

This scenario is a classic ethical dilemma known as the "Trolley Problem," which forces a choice between two morally challenging outcomes. Here's a structured approach to deciding what to do and why:

- ### Step 1: Understand the Scenario
- ****Situation:**** A runaway trolley is heading toward five people tied to a track.
 - ****Option 1:**** Do nothing, resulting in the death of five people.
 - ****Option 2:**** Pull a lever to divert the trolley onto another track, resulting in the death of one person.
- ### Step 2: Identify the Ethical Frameworks
- There are two primary ethical frameworks to consider:
1. ****Utilitarianism:**** Choose the action that maximizes overall happiness or minimizes harm. In this case, diverting the trolley saves five lives at the cost of one.
 2. ****Deontological Ethics:**** Focus on duty and rules rather than consequences. From this perspective, actively causing harm (diverting the trolley) may be considered morally wrong, regardless of the outcome.
- ### Step 3: Analyze Consequences
- ****Doing Nothing:**** Five people die, but no action was taken to cause harm.
 - ****Diverting the Trolley:**** One person dies, but five lives are saved.
- ### Step 4: Consider Moral Responsibility
- Pulling the lever involves taking direct responsibility for the death of one person.
 - Not pulling the lever means allowing five deaths but not directly causing them.
- ### Step 5: Make a Decision
- Using ****Utilitarianism****, the decision would be to pull the lever, as it results in fewer deaths overall.
- Using ****Deontological Ethics****, one might choose not to pull the lever, as it involves actively causing harm.
- ### Final Answer
- The decision depends on which ethical framework you prioritize:
- If you prioritize saving more lives and minimizing overall harm (****Utilitarianism****), you should divert the trolley, sacrificing one life to save five.
 - If you prioritize moral duty and avoiding active harm (****Deontological Ethics****), you should not divert the trolley, even though it results in more deaths.

Ultimately, there is no universally "correct" answer, and different people may choose differently based on their ethical beliefs.

Dúró.

Academic English Translation

Decision: Divert the train to the second track.

Reasoning:

1. **Issue of Autonomy:** The individual tied to the second track does not face an immediate threat, whereas the five individuals are in a position from which they cannot escape.
2. **Unjust Consequence:** Allowing the train to continue on its current path would result in harm to the five individuals who are not at fault, even though they happen to be there.
3. **Promotion of Acceptable Decision-Making:** Choosing to divert is a straightforward decision that avoids causing harm to five people due to an unavoidable circumstance.
4. **Unity and Ethical Conduct:** Demonstrating ethical behavior involves avoiding the sacrifice of many lives for the sake of one individual.

Pause.

Published English Baseline

The trolley problem is a classic ethical dilemma that poses a profound question: Should we intervene to divert a runaway trolley onto a different track, saving five people but causing the death of one, or should we allow the trolley to continue, resulting in the death of five? This scenario forces us to weigh the moral implications of action versus inaction, the value of individual lives, and the consequences of our decisions.

Step 1: Understanding the Scenario

First, let's clearly outline the situation:

- **Runaway Trolley:** There is a trolley moving uncontrollably toward five people tied to the main track.
- **Lever Option:** Next to us is a lever that can divert the trolley onto a side track where one person is tied down.
- **Outcomes:**
 - **Action:** Divert the trolley, saving five but killing one.
 - **Inaction:** Do nothing, resulting in the deaths of five.

Step 2: Identifying the Ethical Frameworks

To analyze this problem, we can consider several ethical frameworks:

1. **Utilitarianism**: Focuses on maximizing overall happiness or minimizing suffering. The decision is based on the outcome's consequences.
2. **Deontological Ethics**: Focuses on duty and rules. Actions are judged based on their adherence to these duties, regardless of the outcomes.
3. **Virtue Ethics**: Emphasizes the character and virtues of the individual making the decision rather than the consequences or rules.

Step 3: Applying Utilitarianism

From a utilitarian perspective:

- **Action**: Diverting the trolley saves five lives at the cost of one. The net gain is four lives saved.
- **Inaction**: Allowing the trolley to continue results in five deaths.

Utilitarianism would likely favor diverting the trolley because it results in the greatest good for the greatest number.

Step 4: Applying Deontological Ethics

From a deontological standpoint:

- **Action**: Diverting the trolley involves actively causing the death of one person, which may violate a moral rule against killing.
- **Inaction**: Allowing the trolley to continue does not involve active participation in killing, though it results in more deaths.

Deontological ethics might argue against diverting the trolley, as it involves actively committing an act that leads to someone's death, which is morally impermissible regardless of the consequences.

Step 5: Applying Virtue Ethics

Virtue ethics would focus on the character and intentions of the person making the decision:

- **Courage**: Taking responsibility to make a difficult choice.
- **Compassion**: Valuing human life and seeking to minimize suffering.
- **Wisdom**: Making a balanced decision that aligns with virtuous behavior.

A virtuous person might consider both the consequences and their moral duties, seeking a decision that aligns with virtues like compassion and wisdom.

Step 6: Considering Responsibility and Intention

Another aspect to consider is the intention behind the action:

- **Action**: Intentionally diverting the trolley to save more lives, but knowing it will kill one person.
- **Inaction**: Choosing not to act, leading to more deaths but not directly causing them.

This raises questions about whether it's worse to actively cause harm or to allow harm to occur through inaction.

Step 7: Evaluating Possible Counterarguments

It's important to consider opposing views:

- **Against Action**: Some might argue that diverting the trolley is playing God, making a decision about who lives and who dies.
- **Against Inaction**: Others might say that failing to act when action could save lives is equally morally culpable.

Step 8: Personal Reflection and Conclusion

After examining the scenario through these ethical lenses, I lean towards the utilitarian approach. Diverting the trolley to save five lives at the cost of one seems justified because it results in a net reduction of suffering and loss of life. However, I acknowledge the moral complexity and the valid concerns raised by deontological ethics regarding the active role in causing harm.

Ultimately, there is no universally accepted answer to the trolley problem, and different individuals may reach different conclusions based on their

moral frameworks and values.

Final Answer

After carefully considering the trolley problem through various ethical frameworks, I conclude that diverting the trolley to save five lives at the expense of one is the morally justified choice. This decision aligns with utilitarian principles, which aim to maximize overall well-being by minimizing harm. While the action involves actively causing the death of one person, the greater good achieved by saving five lives outweighs the negative outcome. However, I recognize that this is a complex dilemma with valid arguments from other ethical perspectives, emphasizing the importance of critically evaluating moral decisions in challenging situations.

Dúró níbẹ̀.

Academic English Translation

My Decision: I choose to divert the train onto the second track.

Reasoning: By redirecting the train, five individuals will be spared, although one person will unfortunately lose their life. If I do not alter its course, five people will die. I believe that the death of one person is preferable to the death of many, as this decision allows for the lives of multiple individuals to continue positively.

Stay there.

Published English Baseline

Your dilemma is a classic ethical thought experiment known as the "Trolley Problem," which challenges us to weigh the moral implications of action versus inaction. The choice you make reveals profound insights about your values, priorities, and moral framework. Here's a deeper exploration of what your decision might say about you:

If you choose to divert the trolley:

- Utilitarian Perspective:** You prioritize the greater good, valuing the saving of five lives at the cost of one. This suggests you are pragmatic and outcome-oriented, focusing on minimizing harm overall.
- Moral Responsibility:** You may believe that taking action to save lives is a moral duty, even if it involves making a difficult decision.
- Emotional Burden:** You might be willing to shoulder the guilt or remorse of actively causing one death to prevent a larger tragedy.

If you choose not to divert the trolley:

- Deontological Perspective:** You may believe that actively causing harm (even to save others) is morally impermissible, adhering to principles like "do not kill" regardless of consequences.
- Moral Integrity:** You might prioritize personal responsibility for your actions, avoiding the role of an active agent in someone's death.
- Emotional Distance:** You could feel less immediate guilt by allowing events to unfold naturally, though you might still grapple with the loss of five lives.

Deeper Reflection:

Your choice also reveals how you weigh competing ethical principles—such as utility versus duty—and how you define responsibility. It challenges you to confront whether you are more comfortable with being an active participant in moral decisions or prefer to avoid direct involvement, even if it leads to a worse outcome.

Ultimately, this dilemma forces introspection: Are you someone who acts decisively for the greater good, or do you adhere to moral absolutes regardless of consequences? There is no universally "correct" answer, but your decision reflects your core values and how you navigate complex moral landscapes.

Residual Deictic Note

Opening uses Mo rí ara mi tí mo wà nítòsí ..., which locates the speaker in the scene via the existential wà. The English reflexive (I find myself ...) does not require this overt locative.

Dúró níbẹ.

Academic English Translation

Decision: Redirecting the train to the second track, which will result in the death of one person.

Reasoning: The lives of five individuals hold greater significance than that of a single person. Although the death of one individual is undoubtedly tragic, making this decision will ultimately preserve the lives of many. This action aligns with principles of utilitarian ethics and reflects a commitment to communal well-being and moral responsibility.

Stay firm in this resolve.

Published English Baseline

The trolley problem is a classic ethical dilemma that poses a profound question: Should you intervene to divert a runaway trolley onto a side track, saving five people but causing the death of one, or refrain from acting, resulting in the death of the five? To navigate this complex issue, we'll explore various ethical frameworks, analyze the implications of each choice, and consider potential objections. Our goal is to arrive at a well-reasoned conclusion.

Step 1: Understanding the Scenario

First, let's clearly outline the scenario:

- **Runaway Trolley**: There is a trolley moving uncontrollably toward five people tied to the main track.
- **Lever**: You are next to a lever that can divert the trolley onto a side track.
- **Consequences**:
 - **Do Not Pull Lever**: The trolley kills the five people on the main track.
 - **Pull Lever**: The trolley diverts onto the side track, killing one person tied there.

Our objective is to determine whether pulling the lever is the morally justified action.

Step 2: Identifying Ethical Frameworks

To analyze this dilemma, we'll apply three primary ethical frameworks:

1. **Utilitarianism
2. **Deontological Ethics
3. **Virtue Ethics

Each framework offers a distinct perspective on how to approach moral decisions.

Utilitarianism

****Definition****: Utilitarianism focuses on maximizing overall happiness or minimizing suffering. The morally right action is the one that produces the greatest good for the greatest number.

****Application to the Trolley Problem****:

- ****Pulling Lever****: Saves five lives at the cost of one. Net gain: four lives saved.
- ****Not Pulling Lever****: Results in five deaths.

From a utilitarian standpoint, pulling the lever is preferable because it reduces total harm.

Deontological Ethics

****Definition****: Deontological ethics, derived from Immanuel Kant's philosophy, holds that certain actions are inherently right or wrong, regardless of consequences. It emphasizes duty and adherence to moral rules or principles.

****Application to the Trolley Problem****:

- ****Moral Rules****: One principle might be "Do not kill" or "Respect each individual's right to life."

If pulling the lever involves actively causing someone's death (even if it saves more lives), it may be considered morally impermissible under deontological ethics. Conversely, not pulling the lever aligns with not actively causing harm.

However, some deontologists might argue that allowing harm when one could prevent it is also a violation of duty, leading to nuanced interpretations.

Virtue Ethics

****Definition****: Virtue ethics focuses on the character and virtues of the person making the decision rather than on rules or consequences. It asks what a virtuous person would do in this situation.

****Application to the Trolley Problem****:

A virtuous person might consider traits like compassion, courage, wisdom, and justice.

- ****Compassion****: Wanting to save as many lives as possible might suggest pulling the lever.
- ****Wisdom and Justice****: Weighing the value of each life impartially could lead to either decision depending on how virtues are prioritized.

This framework does not provide a clear-cut answer but encourages reflection on what kind of person one aims to be through their choices.

Step 3: Analyzing Consequences and Intentions

Beyond these frameworks, it's essential to consider both consequences and intentions:

- ****Consequences****:
 - Pulling Lever: Saves more lives but results in one death.
 - Not Pulling Lever: Allows five deaths without direct intervention.
- ****Intentions****:
 - Pulling Lever: Intending to save lives.
 - Not Pulling Lever: Intending not to cause direct harm.

Understanding these elements can provide deeper insight into which choice aligns with personal moral convictions.

Step 4: Considering Possible Objections

Let's explore some objections that might arise against pulling or not pulling the lever.

Objections Against Pulling Lever:

1. **Moral Responsibility**: By pulling the lever, you become an active participant in causing someone's death.
2. **Slippery Slope**: If we justify sacrificing one life for many, it could lead to justifying harmful actions under similar reasoning in less clear-cut situations.
3. **Individual Rights**: Each individual has an inherent right to life that should not be overridden by utilitarian calculations.

Objections Against Not Pulling Lever:

1. **Passive vs Active Harm**: Allowing harm when it's within your power to prevent it might still be morally culpable.
2. **Greater Good Failing**: Failing to act results in more significant loss of life compared to acting.
3. **Responsibility for Inaction**: Being aware of a means to save lives imposes a moral responsibility to act accordingly.

Step 5: Evaluating Personal Intuitions and Emotions

Often, our initial gut reactions can provide insights into deeply held values and biases regarding such dilemmas.

Personal intuitions may include:

- A strong aversion to actively causing someone's death.
- A desire to minimize overall suffering regardless of how it's achieved.
- Feeling conflicted about taking responsibility for either action or inaction.

Reflecting on these feelings can help align personal ethics with rational analysis.

Step 6: Synthesizing Information

Now, let's synthesize all these considerations:

1. From a utilitarian perspective, pulling the lever is preferable as it maximizes lives saved.
2. Deontological ethics may view pulling the lever as immoral because it involves directly causing someone's death, regardless of the consequences.
3. Virtue ethics does not provide a clear answer but encourages reflection on what virtues are most important in the decision-making process.
4. Consideration of intentions and objections further complicates the decision, highlighting the complexity of moral judgments.
5. Personal intuitions and emotional responses can shape one's perception of the right course of action.

Step 7: Making a Decision Based on Ethical Analysis

Given this comprehensive analysis, my decision would lean towards pulling the lever. This aligns with the utilitarian principle of maximizing overall good by saving more lives. Additionally, while acknowledging the moral weight of actively causing a death, the greater number of lives saved provides a strong ethical justification for this choice.

However, it's crucial to recognize that this may not be the universally accepted answer, and respectful consideration for differing viewpoints—particularly from deontological or virtue-centric perspectives—is essential.

Final Answer: After thoroughly examining the trolley problem through utilitarian, deontological, and virtue ethics frameworks, along with consideration of consequences, intentions, potential objections, and personal intuitions, I believe that pulling the lever to divert the trolley and save the five lives is the morally justified choice. This decision prioritizes maximizing overall well-being and minimizing total harm, even though it involves a painful sacrifice.

Academic English Translation

Decision: I choose to divert the train onto the second track.

Reasoning: If I divert the train, five people will be spared, but one person will die. If I do not divert it, five people will die. Among these five individuals, only one would die if the train is diverted, whereas all five would perish if it is not. Therefore, diverting the train is the most ethical decision because it results in fewer fatalities overall.

Published English Baseline

The scenario you've described is a classic ethical dilemma known as the **Trolley Problem**, which is often used to explore moral philosophy, particularly the concepts of utilitarianism and deontological ethics. Here's a breakdown of the key considerations and potential justifications for each choice:

- ### 1. **Pull the Lever (Divert the Trolley)**
- **Outcome:** Five lives are saved, but one person dies.
 - **Justification:**
 - **Utilitarian Perspective:** This action maximizes overall happiness by saving the greatest number of lives. The moral choice is the one that results in the least harm or the greatest good.
 - **Responsibility:** By acting, you are taking responsibility to minimize loss of life, even if it involves sacrificing one person.
 - **Criticism:** You are actively making a decision that leads to the death of an innocent person, which some might argue is morally equivalent to killing them.
- ### 2. **Do Not Pull the Lever (Allow the Trolley to Continue)**
- **Outcome:** Five people die, but you do not directly cause the death of the one person on the other track.
 - **Justification:**
 - **Deontological Perspective:** This approach focuses on duty and rules rather than consequences. You have a moral duty not to kill, and pulling the lever would involve actively causing harm, which is inherently wrong.
 - **Moral Innocence:** By not acting, you avoid being directly responsible for anyone's death, even though more people die as a result.
 - **Criticism:** Allowing five people to die when you could have saved them may be seen as morally neglectful or indifferent.
- ### 3. **Additional Considerations**
- **Moral Responsibility:** Does your proximity to the lever and your ability to act impose a greater responsibility on you?
 - **Intentions vs. Outcomes:** Are you judged by your intentions (e.g., trying to save lives) or by the outcomes of your actions?
 - **Value of Individual Life:** Is it morally justifiable to sacrifice one life for five, or does each individual life hold equal intrinsic value?
- ### What Should You Do?
- There is no universally "correct" answer, as it depends on your ethical framework:
- If you prioritize outcomes and minimizing harm, pulling the lever may be justified.
 - If you prioritize moral rules and avoiding active harm, not pulling the lever may feel more ethically consistent.

This dilemma highlights the complexity of moral decision-making and forces us to confront difficult questions about responsibility, intention, and value.

Residual Deictic Note

Adds Níbí ... Láti ipò yí, which is the closest Yoruba mapping of the English here/there/from this position contrast. Yoruba lacks a one-to-one demonstrative system, so spatial framing is realised through location adverbs plus a from-position prepositional construction.

Academic English Translation

Decision: Redirect the train to the second track.

Rationale: The death of one individual is less severe than the death of five. While it will result in the unfortunate loss of a single life, it will spare the lives of five others. This course of action is the most ethically justifiable, even though it carries a significant emotional burden.

Published English Baseline

The scenario you've described is a classic ethical dilemma known as the "Trolley Problem," which is often used to explore moral philosophy and decision-making. Here's a breakdown of the situation and the considerations involved:

The Options:

- 1. **Do Nothing:** Allow the trolley to continue on its current track, resulting in the deaths of five people.
- 2. **Pull the Lever:** Divert the trolley onto another track, saving five people but causing the death of one person.

Key Ethical Frameworks to Consider:

- 1. **Utilitarianism (Consequentialism):**
 - Focuses on maximizing overall happiness or minimizing harm.
 - From this perspective, pulling the lever is the morally correct choice because it saves five lives at the cost of one, resulting in a net gain of four lives.
- 2. **Deontological Ethics (Duty-Based Ethics):**
 - Focuses on adherence to moral rules or duties, regardless of consequences.
 - From this perspective, actively diverting the trolley may be seen as morally wrong because it involves directly causing harm to an innocent person, even if it results in a greater good.
- 3. **Virtue Ethics:**
 - Focuses on the character and intentions of the person making the decision rather than on rules or consequences.
 - The decision would depend on what a virtuous person would do in this situation—whether that means valuing compassion, courage, wisdom, etc.

Possible Considerations:

- **Responsibility:** By pulling the lever, you become an active participant in causing someone's death. By not pulling it, you allow harm to occur without direct involvement.
- **Intentionality:** Diverting the trolley involves intending harm to one person, whereas allowing it to continue may involve foreseeing harm but not necessarily intending it.
- **Moral Guilt:** You might feel more guilt for actively causing someone's death than for passively allowing multiple deaths to occur.

Conclusion:

There is no universally "correct" answer to this dilemma—it depends on your ethical perspective and values. Some would argue that pulling the lever is justified because it saves more lives (utilitarianism), while others would argue that it is morally wrong to actively cause harm to an

individual (deontology). Ultimately, your decision reflects your personal moral framework and how you weigh competing ethical principles.

What would you choose, and why?

Residual Deictic Note

Uses ní báyií, ní àkókò yí, lésẹkẹsẹ, ní kíákíá, ní àkókò pàtàkì yí. The temporal markers stack more densely than the English counterpart because Yoruba relies on adverbial chains rather than aspectually-marked verb forms for urgency.

Dúró.

Academic English Translation

My Decision: I choose not to divert the train because the death of one person is more significant than the death of five.

Reasoning: If I were to redirect the train, one person would die, but five would survive. Conversely, if I do not alter its course, five people will die. It is evident that the loss of one life is less severe than the loss of five. Subsequently, the bereaved families will experience less grief, and the world will perceive this as a just action. Although death is inherently tragic, ensuring that it occurs on a smaller scale is crucial.

Pause.

Published English Baseline

The trolley problem you've presented is a classic ethical dilemma that forces us to weigh the consequences of our actions against moral principles. To approach this from the perspective of all existence—the five who might live, the one who might die, their families, and the universe itself—we can consider several philosophical frameworks:

Utilitarianism

From a utilitarian perspective, the decision should aim to maximize overall happiness or minimize suffering. In this case, diverting the trolley to save five lives at the cost of one would be the morally correct choice. The total amount of suffering is reduced, and more lives are preserved, which could be seen as a net positive for society and the universe.

Deontological Ethics

Deontological ethics, based on Immanuel Kant's philosophy, focuses on the morality of actions themselves rather than their consequences. From this perspective, actively diverting the trolley to kill one person might be considered morally wrong because it involves intentionally causing harm, regardless of the positive outcome. Allowing the trolley to continue on its path, even though it results in more deaths, might be seen as morally permissible because you are not directly causing harm.

Virtue Ethics

Virtue ethics emphasizes the character and virtues of the individual making the decision rather than specific actions or consequences. From this standpoint, you might consider what a virtuous person would do in this situation—perhaps valuing compassion, courage, and wisdom. The decision would then reflect what aligns with these virtues, which could lean towards saving more lives or respecting the sanctity of each individual life.

Existential Perspective

From an existential viewpoint, the decision is deeply personal and rooted in your own values and understanding of existence. You must take full responsibility for your choice, acknowledging that there is no inherent meaning in the universe except what we create. This perspective might lead you to make a decision based on what you believe gives your life meaning—whether that's valuing each individual life equally or prioritizing the greater good.

Cosmic Perspective

Considering the universe itself, the lives of six individuals may seem insignificant in the grand scheme of things. However, from a human-centered perspective, each life holds intrinsic value. The decision might then hinge on what best upholds the dignity and worth of human life, even if it seems inconsequential in the cosmic scale.

Conclusion

Ultimately, there is no universally "correct" answer to the trolley problem. Each philosophical framework provides a different lens through which to view the dilemma, and the "best" decision depends on which values and principles you prioritize:

- **If you prioritize maximizing overall well-being**, you might choose to divert the trolley.
- **If you prioritize moral duties and principles**, you might choose not to interfere.
- **If you prioritize personal virtues**, your choice would reflect what you consider to be virtuous behavior.
- **If you embrace existential responsibility**, your decision would be deeply personal and aligned with your own sense of meaning.

Regardless of the choice, it's essential to reflect on the reasoning behind it and recognize the profound complexity of such ethical decisions.

Residual Deictic Note

Uses Láti ojú-ìwòye gbogbo iwàláàyè ... àgbáyé fúnra rẹ. The Yoruba reaches for iwàláàyè (existence) and àgbáyé (cosmos) as the lexical counterparts of the article's perspectivism / cosmological deixis. There is no aspectual residual issue here; the framing is realised lexically.
